

Shift Lock Release Cover

Installation

1. Take the "SHIFT LOCK RELEASE" cover off the A/T gear position indicator panel, and peel off the remaining adhesive. Clean the indicator panel thoroughly with a sponge dampened in alcohol.

2. Remove the peel-off backing from the new cover.
3. Install the cover by aligning the right end with the hollow edge, and press the cover with your fingers to secure it. Make sure the new cover does not move or is not taken off.

4. Make sure the slot on the left end of the cover is exposed. If the slot is covered, remove the cover and reinstall it properly.
