

Synchro Sleeve, Synchro Hub

Inspection

- 1. Inspect gear teeth on all synchro hubs and synchro sleeves for rounded off corners, which indicates wear.
- 2. Install each synchro hub in its mating synchro sleeve, and check for freedom of movement.
If replacement is required, always replace the synchro sleeve and synchro hub as a set.

Installation

Each synchro sleeve has three sets of longer teeth (120 degrees apart) that must be matched with the three sets of deeper grooves in the synchro hub when assembled. Installing the synchro sleeve with its longer teeth in the synchro hub slots will damage the spring ring.
